

Your delivery network, live in 6 weeks.

The first 2 weeks are free.

Customer app, rider app, business portal for restaurants, pharmacies and vendors, an admin dashboard, and an AI agent that books deliveries from a single sentence. Built by Forge Growth for The Triple-Core.

5 days
to kick-off after your yes

#0
for the first 2 weeks of real work

Day 1
the code is yours, in your name

Late?
that milestone's money back

This proposal is interactive.

The Triple-Core (TTC)	Hussein · Forge Growth	Android · iOS · Web	30 days

01 · WHAT YOU'RE BUILDING

Not just a delivery app. A delivery network for businesses.

Restaurants, pharmacies, small businesses and vendors enter what they need delivered, and TTC connects a verified rider to deliver it. Individuals can send packages too. Three groups have to love the product at the same time:

**Senders**
Businesses sending every day, and customers sending now and then. They want a fair price up front, a rider fast, and to see exactly where their package is.

**Riders**
Verified riders who want a steady stream of jobs, clear directions, and to see what they've earned. A simple app that works on lower-cost Android phones.

**TTC operations**
One screen to see every delivery, approve riders, set prices, confirm payments and spot problems before customers complain.

Why the Business Portal is in the first build, not a later phase.

Businesses are where repeat orders come from. A pharmacy that sends 15 deliveries a day is worth more than hundreds of one-time customers. So from launch day, businesses get their own portal: saved pickup addresses, several deliveries at once, history and monthly statements.

What wins in this market

1. **Speed.** A rider assigned in minutes and an honest arrival time.
2. **Trust.** Verified riders, live tracking, and a delivery code so packages reach the right person.
3. **Easy payment.** Card, transfer or cash. No chasing payments over WhatsApp.
4. **Repeat business.** Merchants who find TTC easier than calling their usual rider.

02 · SEE IT WORKING

Don't imagine it. Try it.

We built a working prototype of all four parts before you paid anything. Book a delivery as a customer, accept it as a rider, and watch it appear on the admin dashboard, all connected. The final look will follow your designer's approved designs.

Customer app

Send a package, get an instant price, track the rider live.

Business portal

A pharmacy sends three deliveries in one sentence.

Rider app

Go online, accept a job, confirm pickup and delivery.

Admin dashboard

Live map, rider approvals, pricing and an AI assistant.

In the demo, open **Ask TTC AI** and type: “pick up from my pharmacy in Lekki, deliver to Yaba”.
Or try Pidgin: “abeg carry food from VI go Surulere”.

03 · WHAT WE BUILD

Everything you need to launch, in the first build.

Live tracking, online payments, automatic pricing and the business portal are often left for "phase

2". Here they're part of the first build, because a delivery service needs them on launch day.

ANDROID + IOS

Customer app

- Send a package: pickup, drop-off, item, size
- Instant price before you confirm
- Live tracking and shareable tracking link
- History, digital receipts, ratings
- Call or WhatsApp support

WEB + IN-APP

Business portal

- For restaurants, pharmacies, SMEs and vendors
- Saved pickup address: book in seconds
- Several deliveries at once
- Team members on one business account
- Monthly statements and invoices

ANDROID + IOS

Rider app

- Sign-up with ID, photo, licence, bike papers
- AI checks documents before TTC approves
- Online/offline, job offers, accept
- Google Maps navigation, pickup and delivery codes
- Earnings and performance

WEB

Admin dashboard

- Live map of riders and deliveries
- Approve or reject riders
- Businesses, customers, delivery records
- Pricing rules and payment confirmation
- Revenue summary

REAL TIME

Live map tracking

- Customers and businesses watch the rider move
- Arrival time that updates
- Shareable link for the person receiving

PAYSTACK

Payments

- Card and bank transfer in the app
- Cash on delivery, confirmed in the dashboard
- Receipts sent automatically

AUTOMATIC

Distance-based pricing

- You set base fare, price per km and minimum
- Size and express options
- Change a rate once and every quote updates

AI

AI agent

- Book by chat or voice, English or Pidgin
- AI support for common questions
- Admin assistant for operations questions

LAUNCH

Store launch & handover

- Push notifications for every status change
- Google Play and App Store submission
- Fixes for any store-review issues
- Privacy and data-safety setup
- Handover guide and admin training

04 · AI-FIRST, NEVER AI-ONLY

Your customers talk. The app does the rest.

Most delivery apps make people fill in forms. TTC lets them say what they need, the way they'd tell a rider on the phone. Normal tap-to-book always works too, so nobody is forced to use AI.

Book in one sentence

"Send 3 orders from my kitchen: Yaba, Surulere and Ikeja." The agent prepares all three bookings with prices, and the business taps confirm.

Voice, English or Pidgin

For busy shop owners and customers who would rather talk than type.

Faster rider approvals

AI reads ID and licence photos, checks names match and dates are valid, and flags problems. Your team still makes the final decision.

An assistant for operations

"Which riders are free in Ikeja?" "How many deliveries failed this week?" Answers in seconds, from your live data.

abeg carry food from my kitchen for VI go Surulere, quick quick

♦ Done. Here's your express delivery:

From	Victoria Island
To	Surulere
Item	Food · Express
Price	₦4,400

Confirm & find rider

yes

♦ Tunde (4.9★) is 3 minutes away. I'll update you when he picks up.

6 weeks from kick-off to launch. You pay nothing for the first 2.

Kick-off happens within 5 days of your yes. You'll have working builds on your own phones within the free 2 weeks.

Apple and Google review times are outside anyone's control. Our 6-week promise: every app working and in your hands, and store submission done.

Two plans. Same build. One keeps us with you for a year.

Build

Everything to launch.

₦3,500,000

- ✓ Customer app (Android + iOS)
- ✓ Business portal
- ✓ Rider app with verification
- ✓ Admin dashboard
- ✓ Live map tracking
- ✓ Paystack payments
- ✓ Automatic distance-based pricing
- ✓ AI agent and admin assistant
- ✓ Store launch, handover and training
- ✓ 60 days of bug-fix support after launch

RECOMMENDED

Build + Year

Launch, then grow for 12 months.

₦5,000,000

Everything in Build, plus:

- ✓ **WhatsApp ordering bot:** book a rider by WhatsApp
- ✓ **ChatGPT app:** book and track deliveries from inside ChatGPT
- ✓ **Analytics:** deliveries per rider and day, retention, revenue per customer
- ✓ **Scheduled deliveries**
- ✓ **Automated rider payouts** and company-share calculation
- ✓ **Refunds** module
- ✓ **Shopify & WooCommerce plug-ins** so online vendors book TTC automatically
- ✓ **12 months** of support, fixes, monitoring, phone and store updates, and a monthly check-in

₦1.5M more covers 12 months: about **₦125,000 a month** for a team that already knows your platform.

Payment schedule: nothing before you've seen working software

WHEN	BUILD	BUILD + YEAR
Weeks 1–2 · free trial	¥0	¥0
You choose to continue (end of week 2) · 40%	¥1,400,000	¥2,000,000
All apps on your phones for testing (week 5) · 30%	¥1,050,000	¥1,500,000
Launch and handover (week 6) · 30%	¥1,050,000	¥1,500,000
Total	¥3,500,000	¥5,000,000

On the Build + Year plan, the 12 months start on launch day. Year-plan features are delivered on a roadmap we agree together. Brand-new features outside this list are quoted separately before any work starts.

07 · GUARANTEES

We carry the risk, not you.

1

2 weeks free, real work

Not a sample. We start building your platform. If you decide not to continue, you keep all the code and owe nothing.

2

On time, or money back

If a milestone is late because of us, that milestone's payment is refunded. The clock only pauses for delays outside our control: waiting on feedback, content, account verification or store review.

3

Your code from day one

The code lives in a repository in TTC's name from the first commit, not handed over at the end. App store listings, cloud hosting and Paystack are in TTC's name too. You're never locked in.

4

A year you can count on

On the Build + Year plan, if we ever stop supporting you during the year, the unused months are refunded.

Extras, because launch day matters too.

Launch video

A motion-graphics video of the app, ready to post on launch day.

Draft logo & colours

The TTC mark on this page. Use it, adjust it, or replace it.

Store graphics

Play Store and App Store screenshots and descriptions.

This live demo

Share it with partners and investors before launch.

09 · TECHNOLOGY & SECURITY

Proven, modern and easy to hand over.

Mobile apps	React Native: one codebase for Android and iOS
Backend	Node.js + TypeScript, PostgreSQL, real-time updates
Web	React business portal and admin dashboard
Services	Google Maps · Paystack · Gemini AI · Firebase push
Security	Role-based access, encrypted passwords, private rider documents, protected APIs, daily backups
Hosting	Set up in TTC's own cloud account

10 · COSTS YOU PAY DIRECTLY

No surprises on running costs.

- **Apple Developer** \$99 per year and **Google Play** \$25 once, both in TTC's name.
- **Running costs** paid straight to providers: hosting, domain, Google Maps, SMS codes, AI usage beyond free tiers, Paystack transaction fees.
- In week 1 we give you a **monthly cost estimate**, and set things up to stay on free or low tiers at launch where possible.

WHAT WE NEED FROM YOU

- Feedback within 2 business days at each review.
- Apple, Google and Paystack business accounts in TTC's name.
- Your pricing rules, business details and policy text (we can provide a starting template).
- Designs from your designer, if ready. If any screens aren't, our designer fills the gaps so the build isn't held up.

Forge Growth: one accountable lead, a full team behind him.

You deal with Hussein directly. Behind him is a team of four, so your project never depends on one person. Everything is documented and lives in your repository.

 Hussein Founder & Lead Engineer Owns delivery end to end. Your single point of contact.	 Team member Mobile Engineer · React Native Customer and rider apps for Android and iOS.	 Team member Backend Engineer API, database, live tracking, payments and security.	 Team member Product Designer & QA Screens, store graphics and testing on real phones.

Answers before you ask.

Something not covered? Ask the proposal assistant (bottom right). It answers from this proposal only, and anything it can't answer comes straight to Hussein.

What exactly do we get in the free 2 weeks?

Real work on your platform: backend, accounts and login, the customer "send a package" flow with automatic pricing, and the admin pricing screen. It runs as a test app on your own Android phones and iPhones, so you can judge the quality and how we communicate before you pay anything.

What if we decide not to continue after 2 weeks?

You keep all the code we've written (it's already in a repository in TTC's name) and you owe nothing. No pressure and no hard feelings.

What happens if you're late?

If a milestone is late because of us, that milestone's payment is refunded. The clock pauses only for delays outside our control: waiting for your feedback or content, Apple, Google or Paystack account verification, or store review times.

How can you finish in 6 weeks?

A team of four working in parallel, one React Native codebase for both Android and iOS, and proven building blocks for login, payments, maps and notifications. AI-assisted development speeds up routine work, and every feature is still reviewed and tested by a person. And we've already started: the demo exists.

Who owns the code, the apps and the accounts?

TTC does, from day one. The code repository, Play Store and App Store listings, cloud hosting and Paystack account are all in TTC's name.

Why choose Build + Year over Build?

For ₦1.5M more (about ₦125,000 a month) you get 12 months of support and updates, plus the features that help TTC grow after launch: WhatsApp ordering, a ChatGPT app, analytics, scheduled deliveries, automated rider payouts, refunds, and Shopify/WooCommerce plug-ins for online vendors. If we ever stop supporting you, unused months are refunded.

Our designer is working on designs. Will you use them?

Yes. We build your designer's approved designs as supplied. The demo is a prototype to show the experience. If some screens aren't ready, our designer fills the gaps in your style so the build isn't held up.

What isn't included in the price?

Apple (\$99/year) and Google (\$25 once) developer accounts, and running costs paid straight to providers: hosting, domain, Google Maps, SMS codes, AI usage beyond free tiers and Paystack transaction fees. We give you a monthly estimate in week 1.

What if we want new features during the build?

We note them and add them to the roadmap (included on the Build + Year plan where they're on the list, otherwise quoted before any work starts). This protects your launch date.

Do riders need expensive phones?

No. The rider app is tested on lower-cost Android phones and is designed to work with patchy mobile data.

How does the AI cost work?

The AI runs on Google Gemini, which has a free tier that covers early usage. As TTC grows, usage costs are small per conversation and are included in the monthly estimate we give you in week 1. The app works fully without AI, so it's never a single point of failure.

What if Apple rejects the app?

Fixing issues raised in the first store reviews is part of the build. We prepare privacy, data-safety and location-permission information carefully up front to avoid the common rejections.

What happens after launch on the Build plan?

60 days of bug-fix support is included. After that you can move to the Year plan or call us for work as needed. Either way the code is yours and documented, so any developer can continue.

What if Hussein is unavailable?

Forge Growth is a team of four, so work continues. The code is documented and lives in TTC's repository, so you are never dependent on one person.

Say yes, and we start within 5 days.

1. **Message Hussein** with "yes" and your preferred plan.
2. **Kick-off call** within 5 days: we confirm features, pricing rules and accounts.
3. **Two free weeks start.** You'll see progress on your phones every few days.

Acceptance

Approval confirms the scope, the selected plan, the payment schedule, the guarantees and the responsibilities in this proposal. Work starts at kick-off. The first payment is due only if TTC chooses to continue after the free 2 weeks.
